

Bird rest for MV pole switches and cross arms

MMK

Product description:

The MMK-1 bird rest which can be placed on top of utility poles, horizontal pole switches, and cross arms of medium voltage networks, provides safe rest stop for birds. Because of the adequate distances the feces of the birds seating on them will not damage the electrical components. We design the form and the size of the bird rest based on opinions of bird protection experts and power distributor professionals.

The form, size and surface quality of the landing area are designed to provide proper rest stop for preferably all birds in Hungary that can potentially be a hazard. Therefore the diameter of the horizontal rest stop is 70-100 mm which provides suitable grip for birds, from falcon-sized to stork-sized.

Technical data:

Parameter

Value

Material of the clamping part (vice):

50 mm galvanized "T" profile

Clamping range:

0-150 mm.

Tightening torque:

18 Nm.

Material of the bar:

Fiberglass reinforced polyester with weather, UV and wear resistant coat, the same material as used in ship building.

Vertical positioning measured from the clamping point:

1200 mm.

Horizontal protrusion measured from the clamping point:

900 mm.

Load capacity:

20 kg.

Weight:

5 kg.

Wind resistance:

Negligible.

Lifespan:

> 25 years.

Mounting:

The MMK bird rest can be mounted on both voltage-free and live networks. The bird rest can be mounted to its proper place by the means of M16 bolts supplied with live-line eyes.
